## 'À la carte' concept

For years the Utopia range has been a myth for all music and car lovers. It has become a benchmark thanks to our unique technologies.

With our rich history and strong DNA, we set ourselves a huge challenge: to renew the range and establish a new reference of high-end drivers in the market.

And thus Utopia M was born, the quintessence of our expertise and our latest patented technologies.

Utopia M is an innovative, 'à la carte' concept, that lets you build your own bespoke system depending on your vehicle, the only limit being your creativity and that of the installer fitting it.

When devising its unique design, a mix of tradition and innovation, our designers drew on the codes and richness of French architecture.

This work was possible thanks to the development of our patented 'M'-profile 'W' sandwich cone, which pushes the boundaries by perfectly combining the 3 criteria essential for creating the ideal driver: rigidity/lightness/damping.

In combination with our patented TMD® surround, distortion is reduced, thus increasing the precision and realism of the midrange.

Our Beryllium tweeter also benefits from these innovations and includes an 'M'-shape inverted dome combined with our TMD® surround, which provides a striking level of detail.

With Utopia M, the legend continues...

# K2 POWER

More than products, a lifestyle!

Besides its distinct yellow colour, the K2 Power line has become a lifestyle object in its own right worldwide. Once more, our engineers have pushed back the limits of performance to continue making the reputation of this extraordinary line synonymous with power and precision!

The K2 Power's composite sandwich cone combines three key features: rigidity, lightness and damping. This unique expertise 'Made in Focal' combines a new patented TMD® (Tuned Mass Damper) rubber surround which controls unwanted resonances to provide a clean and neutral midrange with very low harmonic distortion.

The ventilated voice-coil gap keeps the temperature of the voice-coil low and stable for increased power handling and reliability. The subwoofers have been designed to work in very compact volumes while having a very high SPL and an amazing energy!

Finally, the major innovation of this line made in France is the 'M' profile aramidfibre inverted dome tweeter. This totally exclusive 'M' profile inverted dome tweeter has been specifically designed to increase precision in the very high frequencies. The push-pull motor inspired by the IAL technology dampens acoustic resonances on the back of the membrane and extends the low end of the frequency response, in a very compact housing.

## Perfect balance for high dynamic

Over the last years, there have been many innovations regarding the materials used. The return to natural materials and their combination with modern composites has resulted in the creation of new kinds of modern hybrids.

The 'Sandwich' technology which we master perfectly with the K2 and 'W' cones is the best way to achieve a perfect balance between rigidity/weight/damping.

The key to success for a speaker cone made by Focal lies in the satisfaction of these conflicting criteria.

When it came down to the delicate choice regarding the design of the core of the sandwich structure, our engineers were soon impressed by the characteristics particular to Flax. After five years of research, the Flax sandwich cone was born. The use of an ecological textile such as flax, combined with our composite technology has led to an innovative solution for manufacturing sandwich structures: very high-quality flax fibres between two sheets of glass fibres. French flax is considered the best in the world, and another important detail is that the manufacturing process can be mechanised and automated.

The high-end products of our Expert line are the result of our constant efforts to differentiate ourselves and our goal to provide ultimate acoustic reproduction, featuring six Performance kits: the 'F' series.

## ACCESSORIES

### Hilo.V2

Converts a stereo amplified signal in two low-level line outputs for an amplifier.

Eliminates parasitic interferences - separated grounds

Selectable DC and AC voltages detection and is compatible with any original manufacturer head-units.

It automatically generates a remote control signal to activate the associated amplifier can be used in passive mode without 12V power supply (In that case the remote output doesn't work).
